

Biochemical Diagnostics, Inc.

Dear Customers:

I am very happy to welcome Paul Whitter to our company. Paul will manage all aspects of support for our extensive line of products related to the preparation and analysis of samples by TLC, LC and GC-MS.

As you can see from the picture Paul has selected for this announcement he is a very “hands-on” type of guy. He is quite likely to show up in scrubs ready to jump into any project he is called upon to do in the forensic and clinical toxicology laboratories.

Paul’s extensive and diversified combination of education and work experience in the field has given him a depth of knowledge appreciated by all of us who have had the pleasure of working with him.

Paul has worked as a certifying scientist in high profile SAMHSA laboratories and has helped several laboratories achieve or maintain SAMHSA certification.

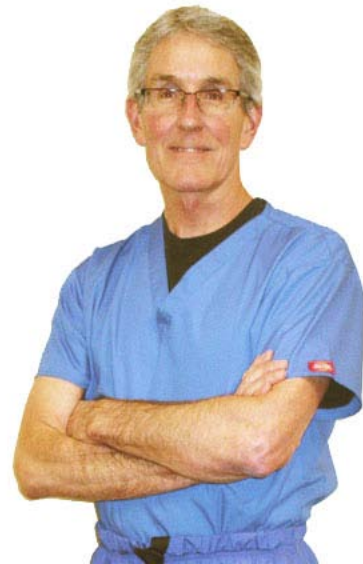

Areas of expertise include:

- Setting up and/or troubleshooting sample preparation methods, GC/MS acquisition methods, and method validation.
- Knowledgeable about all aspects of confirmation testing and data-review operations.
- Organizing the laboratory confirmation areas to enable them to grow with current staffing.
- Primary responsibility for employee training in numerous forensic laboratories.
- Performing instrument and methods evaluations in order to provide recommendations to the OTS management team regarding standardized procedures, instrumentation, etc.

Sincerely,

Allen Panetz
President
